Bring this log to your GI appointment

Your doctor will use stool frequency, blood presence, pain levels, and nighttime symptoms to assess your disease activity and adjust your treatment plan.

Patient name: _____

Week of: _____ Week 2 of 2

How to score your symptoms

Pain (0–10): 0 = no pain at all · 5 = noticeable but manageable · 10 = worst pain imaginable

Urgency (0–10): 0 = no urgency · 5 = can wait a few minutes · 10 = cannot delay at all

Stool Frequency: Count all bathroom trips including incomplete ones. Write the total number for the day.

Blood in Stool?: Write Yes or No. If yes, note whether it is a small streak or heavy bleeding in Notes.

Stress (L/M/H): L = low (calm day) · M = medium (some pressure) · H = high (very stressful day)

Foods Eaten Today: Write the main foods you ate. You do not need to list every item — focus on anything unusual.

What to highlight for your GI doctor

Nighttime symptoms (waking to use the bathroom) · Days with blood · Pain scores above 6 · Days where urgency was 8 or higher · Any foods that consistently made symptoms worse
